

MES Server OS 2016 to 2019 upgrade verification

These are the pictures for verification of MES functioning after the OS upgrade of the Quality servers 23VMESAPPQ001 CHG0162475 , W23VMESSEIHQ001 CHG0162915, W23VMESDBQ001 CHG0162734.

OS Windows Server 2019:

The screenshot shows the Windows Settings application, specifically the 'About' page. The left sidebar contains a list of settings categories: Home, Find a setting, System, Display, Sound, Notifications & actions, Focus assist, Power & sleep, Storage, Tablet mode, Multitasking, Remote Desktop, and About (which is currently selected). The main content area is titled 'About' and is divided into two sections: 'Device specifications' and 'Windows specifications'. The 'Device specifications' section lists the following information: Device name (W23VMESAPPQ001), Processor (Intel(R) Xeon(R) Gold 6248R CPU @ 3.00GHz 2.99 GHz (2 processors)), Installed RAM (8.00 GB), Device ID (365E47E7-F69D-43BC-8F93-B8BAC67F60F4), Product ID (00429-70000-00000-AA056), System type (64-bit operating system, x64-based processor), and Pen and touch (No pen or touch input is available for this display). The 'Windows specifications' section lists: Edition (Windows Server 2019 Standard), Version (1809), Installed on (6/25/2024), and OS build (17763.5936). Below this, there are three blue links: 'Change product key or upgrade your edition of Windows', 'Read the Microsoft Services Agreement that applies to our services', and 'Read the Microsoft Software License Terms'. At the bottom, there is a 'Related settings' section with a link to 'System info'.
